TUPPING TIPS FROM OUR SQPS

BODY CONDITION SCORES

Body condition scoring can't be determined by sight alone, make sure you feed ewes thoroughly.

- A starting body condition of 3 to 3.5 is recommended, and it's important to remember that it can take up to 6 weeks to gain one BCS!
- Group ewes according to score and remember to prioritise good grazing for ewes; finishing lambs on good pasture can be of detriment to your ewes.

CULL LIST

Ultimately, it is up to you to control the quality of your breeding stock - do not allow for problematic animals!

Cull criteria should include points such as:

- Repeatedly lame
- Chronically misshapen feet
- Broken mouths
- Aged ewes
- Barren/aborted ewes
- Vaginal prolapses
- Lamb rejection
- Mastitis and blind teats

EWES LAMBS & SHEARLINGS

Ensure ewe lambs and shearlings have reached correct target weights prior to tupping.

- Shearlings should be minimum 80% of adult body weight
- Ewe lambs should be minimum 60% of adult body weight

NEW STOCK

- Protect existing flocks from disease by quarantining all new stock for a **minimum of 4 weeks**.
- Monitor stock for any signs of disease and treat promptly

PARASITES

- For farms with streams and boggy land, fluke is a much higher risk. Warm and wet conditions in the summer are perfect for fluke development.
- Compared to normal round worms, haemonchus can thrive well on pasture even in hot weather. This worm is lethal in causing severe anaemia in a very short timespan and symptoms can be very similar to acute fluke infections.

FLY STRIKE

Ensure protective fly treatments are repeated where needed.

TEASER RAMS

- Teasers should remain with ewes for a maximum of **14 days**
- Teasers should be replaced by main rams on the same day
- Ensure rams are matched to ewes at a ratio of 1 ram to 30 ewes.

Tear off or bring your checklist in-store or give to a rep to order!
