

TUPPING CHECKLIST 2022

GET READY FOR TUPPING THIS YEAR WITH OUR TUPPING CHECKLIST 2022

We know tugging can be a very busy time, with careful co-ordination required to ensure maximum gain from your flock. Leave the guesswork out and receive expert advice from our team of qualified SQP's - either on the phone or at our dedicated animal health counter instore.

All you need to do is tick which products you need, place your order with a member of our team, and it will be delivered to your door or collect from our store.

Looking for advice? Talk to a member of our friendly team today.

Email: sales@stowag.com

SUPPLEMENT YOUR STOCK... HAVE YOU TRIED OUR NEW STOWAG TUBS?

StowAg Hi-Energy is a mineral block that can be used throughout the year to provide Rams, Ewes and Lambs with a balanced level of vitamins and minerals to maintain optimum health and performance.

These blocks are suitable for use with sheep pre-tugging and pre-lambing.

View the full range online today!
www.stowag.com/stowag-tubs

Since 2014 we have been located in the heart of the Cotswolds, between Stow-on-the-Wold and Moreton-in-Marsh. 2022 marks the opening of our Thame, Oxfordshire branch which enables us to serve a wider radius covering the South East of England.

Both stores benefit from free delivery within 50 miles which means we can now offer our high-quality service to a larger radius.

Stores open to all, Monday - Friday 7:30am-5pm

Delivery
We use our own fleet of trucks to deliver for free within 50 miles of our store

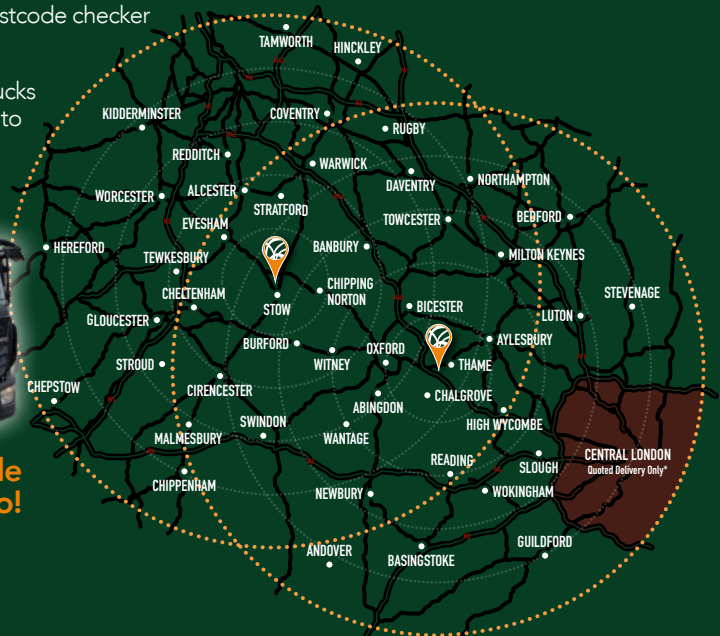

WE OFFER A FREE DELIVERY SERVICE WITHIN 50 MILES OF OUR STORES

Take a look at our online postcode checker to see whether you qualify.

We use our own fleet of trucks and friendly team of drivers to deliver your order within three working days.

We go the extra mile so you don't have to!

TUPPING TIPS FROM OUR SQPS

BODY CONDITION SCORES

Body condition scoring can't be determined by sight alone, make sure you feed ewes thoroughly.

- A starting body condition of 3 to 3.5 is recommended, and it's important to remember that it can take up to 6 weeks to gain one BCS
- Group ewes according to score and remember to prioritise good grazing for ewes; finishing lambs on good pasture can be of detriment to your ewes.

CULL LIST

Ultimately, it is up to you to control the quality of your breeding stock - do not allow for problematic animals!

Cull criteria should include points such as:

- Repeatedly lame
- Chronically misshapen feet
- Broken mouths
- Aged ewes
- Barren/aborted ewes
- Vaginal prolapses
- Lamb rejection
- Mastitis and blind teats

In need of advice? Call to talk to one of our SQPs

EWES LAMBS & SHEARLINGS

Ensure ewe lambs and shearlings have reached correct target weights prior to tupping

- Shearlings should be minimum 80% of adult body weight.
- Ewe lambs should be minimum 60% of adult body weight.

NEW STOCK

- Protect existing flocks from disease by quarantining all new stock for a **minimum of 4 weeks**.
- Monitor stock for any signs of disease and treat promptly.

PARASITES

- For farms with streams and boggy land, fluke is a much higher risk. Warm and wet conditions in the summer are perfect for fluke development.
- Compared to normal round worms, haemonchus can thrive well on pasture even in hot weather. This worm is lethal in causing severe anaemia in a very short timespan and symptoms can be very similar to acute fluke infections.

FLY STRIKE

Ensure protective fly treatments are repeated where needed.

TEASER RAMS

- Teasers should remain with ewes for a maximum of **14 days**.
- Teasers should be replaced by main rams on the same day.
- Ensure rams are matched to ewes at a ratio of 1 ram to 30 ewes.

Tear off or bring your checklist in-store or give to your rep to order!
